# How FurCarer and FurLink Work Together

*Understanding the Connection Between Pet Owner and Veterinarian Apps*

## Who Uses Which APP

### FurCarer APP - For Pet Owners

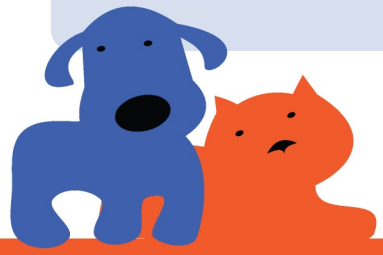

- Used to activate and pair the CGM sensor.
- Displays real-time glucose readings.
- Syncs data securely to the cloud.

### FurLink App — for Veterinarians

- Allows vets to remotely follow and monitor patients.
- Displays glucose curves and reports in real time.
- Also accessible via FurLink Web Portal.(www.user.furcarer.com)

Scan QR code to Download Apps

FurCarer

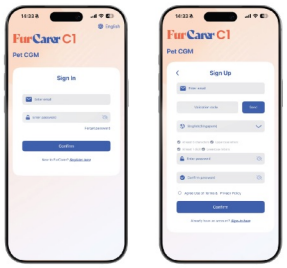

# Pairing the CGM Sensor (via FurCarer App)

1. Scan QR code to Download FurCarer App from App Store / Google Play.

Download on the App Store

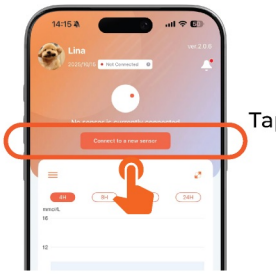

GET IT ON Google Play

2. Log in or Create a FurCarer account.

If you have trouble of receiving verification code please check your spam folder, if it's not there, contact you local distributor for support

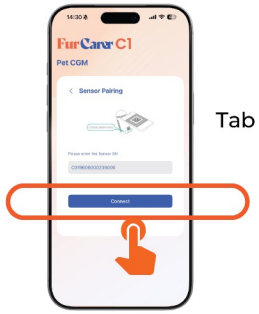

3. Tap "Connect a new Sensor" and scan the sensor's QR code, and wait for the Bluetooth connection to complete.

Tap the button

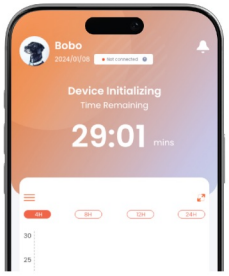

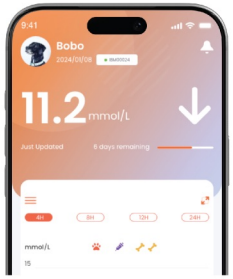

Scan QR Code on the Applicator

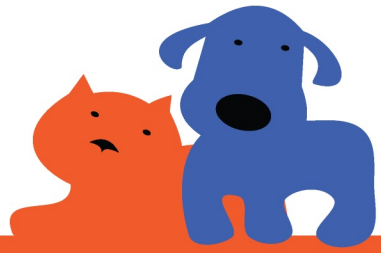

Tab the [Connect] button

4. Glucose readings will begin after the 30 minutes warm-up period.

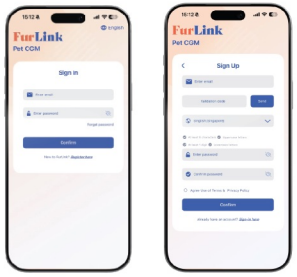

# Linking the Pet with the Veterinarian (via FurLink App)

1. Scan QR code to Download FurLink App from App Store / Google Play.

Download on the App Store

GET IT ON Google Play

2. Log in or Create a FurLink account.

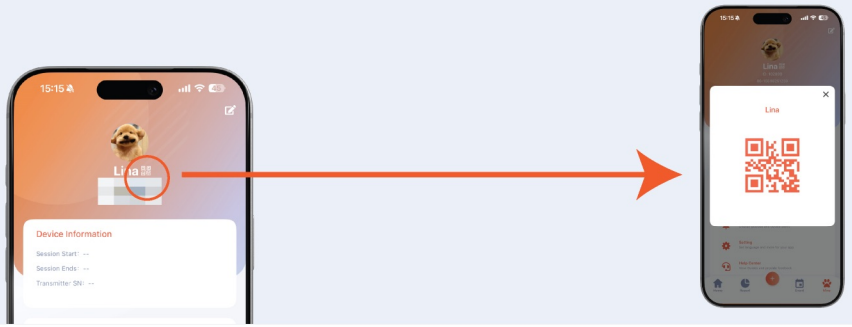

If you have trouble of receiving verification code please check your spam folder, if it's not there, contact you local distributor for support

3. Please ask the owner to share their FurCarer account QR Code (found in FurCarer → My → QR Code) or alternatively, they can provide you the account email.

How does the pet owner find the account QR Code

FurCarerAPP → My → Tab the QR Code

4. Tab the "+" icon to scan the owner's FurCarer App QR code or send an email invitation.

5. Once the owner approves your follow request in the FurCarer App, you will be able to remotely access their glucose data.
